About

Product Designer who bridges the gap between design and a working product. Designed and independently built the frontend for the keepI app (React + CSS) – from initial research and hypotheses to a fully functional interface. Grounded in logic and metrics: always focusing on user value, business goals, and post-launch validation.

Experience

keepI

September 2025 – Present

- **End-to-End Product Design:** Developed UX/UI concepts for a web product from scratch, managing the process from research to final interfaces.
- **Market & User Research:** Conducted market, target audience, and competitor research to formulate and validate product hypotheses.
- **User Experience Mapping:** Crafted user scenarios and use cases to identify and address core user needs.
- **Usability Testing:** Conducted prototype usability testing to refine and iterate on designs.
- **UX Optimization:** Ran informal user testing for a goal-setting feature, identifying and eliminating UX bottlenecks, which significantly boosted completion rates.
- **Design System Ownership:** Created and maintained a design system ensuring UI consistency across the product.
- **Responsive & PWA Design:** Developed adaptive interfaces for mobile and desktop web applications (PWA).
- **Conversion Optimization:** Designed a responsive landing page as the primary touchpoint, successfully reducing Time-to-Value (TTV).
- **Analytics Integration:** Set up landing page analytics to evaluate product positioning effectiveness and test hypotheses.
- **Frontend Implementation:** Translated design into production-ready code (React + CSS) with the help of AI, ensuring pixel-perfect interface execution.

Hired App

July 2024 – August 2025

- **User & Competitor Research:** Conducted guerrilla testing and competitive analysis to uncover key user pain points and expectations.
- **Product Architecture:** Framed JTBD and CJMs to refine product architecture and user flows.
- **Prototyping:** Designed user flows, wireframes, and interactive prototypes.
- **Visual & UI Design:** Developed visual concepts and UI for web applications, aligning with product requirements and platform guidelines.
- **Design System Scaling:** Built a design system that streamlined UI scalability and improved collaboration with the development team.

Freelance (UI design)

March 2023 – May 2024

- **MVP Development:** Designed UI interfaces for small business MVPs (landing pages, client dashboards, web services).
- **UX Improvement:** Created wireframes and interactive prototypes to validate design hypotheses and enhance user experience.
- **Design Handoff:** Created design concepts and UI guidelines for efficient and seamless handoff to development.
- **Client Management:** Collaborated directly with clients to gather requirements, propose solutions, and manage projects through to final layouts.

Skills

- **Product Design:** End-to-end user journey design, user problem-solving, feature design, business requirements alignment, product hypotheses, MVPs
- **Product Analytics & UX Metrics**
- **UX Research & Frameworks:** User Flow, information architecture, user scenarios, CJM, User Stories, personas, Jobs-To-Be-Done, UX patterns
- **Visual Design:** Typography, responsive/adaptive design, interface design
- **Wireframing & Interactive Prototyping**
- **Design Systems:** UI kits, component libraries, design tokens, atomic design
- **UX Copywriting & UX Content**
- **Development:** Vibe Coding (AI-assisted development)
